Introduction

Preparing for a certification exam can feel overwhelming, but with the right tools, it becomes an opportunity to build confidence, sharpen your skills, and move one step closer to your goals. At Examzify, we believe that effective exam preparation isn't just about memorization, it's about understanding the material, identifying knowledge gaps, and building the test-taking strategies that lead to success.

This guide was designed to help you do exactly that.

Whether you're preparing for a licensing exam, professional certification, or entry-level qualification, this book offers structured practice to reinforce key concepts. You'll find a wide range of multiple-choice questions, each followed by clear explanations to help you understand not just the right answer, but why it's correct.

The content in this guide is based on real-world exam objectives and aligned with the types of questions and topics commonly found on official tests. It's ideal for learners who want to:

- Practice answering questions under realistic conditions,
- Improve accuracy and speed,
- Review explanations to strengthen weak areas, and
- Approach the exam with greater confidence.

We recommend using this book not as a stand-alone study tool, but alongside other resources like flashcards, textbooks, or hands-on training. For best results, we recommend working through each question, reflecting on the explanation provided, and revisiting the topics that challenge you most.

Remember: successful test preparation isn't about getting every question right the first time, it's about learning from your mistakes and improving over time. Stay focused, trust the process, and know that every page you turn brings you closer to success.

Let's begin.

SAMPLE

How to Use This Guide

This guide is designed to help you study more effectively and approach your exam with confidence. Whether you're reviewing for the first time or doing a final refresh, here's how to get the most out of your Examzify study guide:

1. Start with a Diagnostic Review

Skim through the questions to get a sense of what you know and what you need to focus on. Your goal is to identify knowledge gaps early.

2. Study in Short, Focused Sessions

Break your study time into manageable blocks (e.g. 30 – 45 minutes). Review a handful of questions, reflect on the explanations.

3. Learn from the Explanations

After answering a question, always read the explanation, even if you got it right. It reinforces key points, corrects misunderstandings, and teaches subtle distinctions between similar answers.

4. Track Your Progress

Use bookmarks or notes (if reading digitally) to mark difficult questions. Revisit these regularly and track improvements over time.

5. Simulate the Real Exam

Once you're comfortable, try taking a full set of questions without pausing. Set a timer and simulate test-day conditions to build confidence and time management skills.

6. Repeat and Review

Don't just study once, repetition builds retention. Re-attempt questions after a few days and revisit explanations to reinforce learning. Pair this guide with other Examzify tools like flashcards, and digital practice tests to strengthen your preparation across formats.

There's no single right way to study, but consistent, thoughtful effort always wins. Use this guide flexibly, adapt the tips above to fit your pace and learning style. You've got this!

Questions

SAMPLE

1. What is the name of the sample advanced prep report for Next 3 Days?

A. Advanced Prep Report - Upcoming Orders (Next 3 Days)

B. Advanced Prep - AMB Orders (Next 3 Days)

C. Advanced Prep - Therapy Orders (Next 3 Days)

D. Advanced Prep - AMB Treatment Therapy Plan Orders (Next 3 Days)

2. Which of the following controls the summary sentence in the Order Composer?

A. Display Items

B. Summary Items

C. Item Control

D. Billing Status

3. Which of the following is a customized, patient-specific version of the regimen?

A. Protocol

B. Treatment Plan

C. Schedule

D. Regimen

4. Where do you define the overall order category for an order group?

A. In the EAP record for the order being added

B. Default Order Category

C. You can't and must define it for each order in the group.

D. In the OSQ record

5. Administrators and builders log into which two interfaces to build and configure the system?

A. Classic and Text

B. Hyperspace and Chronicles

C. Hyperspace and Text

D. Chronicles and Text

SAMPLE

6. Which field in the EAP record allows for defining multiple contexts with varying OCCs?

A. Display Items

B. Summary Items

C. Configuration

D. Item Control

7. The MAR will automatically document the stopped time of an infusion.

A. Not Specified

B. Sometimes

C. True

D. False

8. Which statement is true about the display of Treatment Conditions order comments in the Treatment Plan?

A. The Comment is optional

B. Comments are not shown

C. Comments are restricted

D. The Comment must appear as a display item

9. What is a purpose of survivorship visits for an oncology patient?

A. To discuss treatment options and assign a patient's treatment plan.

B. To administer chemotherapy treatment.

C. To monitor the patient's side effects and monitor for any cancer recurrence.

D. To assess the severity of the patient's cancer through staging.

10. Which scheduling strategy is best for two departments needing different buffer times between infusions?

A. The Infusion Duration Table and a Cadence Decision Tree to modify the buffer time depending on the infusion department being scheduled to.

B. Define the appointment length in two different Procedure (EAP) records for the different infusion departments.

C. Define the appointment length in two different Order Group (OSQ) records for the different infusion departments.

D. Use the Infusion Duration Table.

Explanations

SAMPLE

1. What is the name of the sample advanced prep report for Next 3 Days?

A. Advanced Prep Report - Upcoming Orders (Next 3 Days)

B. Advanced Prep - AMB Orders (Next 3 Days)

C. Advanced Prep - Therapy Orders (Next 3 Days)

D. Advanced Prep - AMB Treatment Therapy Plan Orders (Next 3 Days)

In Epic Beacon, the sample advanced prep report name is constructed to reflect three things: the prep purpose, the setting, and the content, plus the time window. The correct choice combines all of these exactly: it uses Advanced Prep to signal the pre-visit preparation, AMB to denote ambulatory care, Treatment Therapy Plan Orders to specify the precise type of orders being prepared, and it notes the window "Next 3 Days." This full, specific labeling is what identifies it as the sample report for the Next 3 Days. The other options are less precise: they either omit the ambulatory context, replace the specific content with a broader term like Therapy Orders, or change the content to something not matching the intended report. The exact wording with Treatment Therapy Plan Orders for AMB in the Next 3 Days is what makes the last option the correct one.

2. Which of the following controls the summary sentence in the Order Composer?

A. Display Items

B. Summary Items

C. Item Control

D. Billing Status

The summary sentence is the concise description the Order Composer creates by pulling in information about what's in the order. The control that directly determines what gets included in that sentence is the Summary Items area. It specifies which items should be summarized and how they're represented, so changing it changes the content and wording of the summary sentence. Other controls affect other aspects—Display Items changes what you see in the item list on the screen, Item Control handles per-item options, and Billing Status affects payment-related information—without altering the actual summary text.

3. Which of the following is a customized, patient-specific version of the regimen?

A. Protocol

B. Treatment Plan

C. Schedule

D. Regimen

The idea being tested is how care is tailored to an individual. A treatment plan is a patient-specific blueprint that lays out goals, chosen therapies, how those therapies will be adjusted over time, and how monitoring and possible changes will be handled based on the person's unique disease, organ function, comorbidities, and preferences. This plan translates a general approach into concrete steps designed for one patient, making it the customized version of the regimen. A protocol, by contrast, is a standardized method used for groups or studies and isn't focused on individual tailoring. A schedule concerns the timing of doses and visits, not the overall personalized plan. The regimen refers to the actual drugs and dosing, which can be part of a plan but doesn't by itself denote personalization.

SAMPLE

4. Where do you define the overall order category for an order group?

A. In the EAP record for the order being added

B. Default Order Category

C. You can't and must define it for each order in the group.

D. In the OSQ record

The main idea is that a group's overall classification is defined at the group level by setting its Default Order Category. This single default applies to all orders within that group, ensuring consistent categorization for workflow and reporting. You'd only override for a specific order if needed, but the default keeps the group aligned. The other options aren't about the group-wide setting: the EAP record and the OSQ record serve different purposes, not to define the group's overall category. So, the Default Order Category is the correct place to define the group's overall category.

5. Administrators and builders log into which two interfaces to build and configure the system?

A. Classic and Text

B. Hyperspace and Chronicles

C. Hyperspace and Text

D. Chronicles and Text

Administrators and builders perform configuration and development in two distinct interfaces: Classic and Text. Classic is the traditional administration UI where system-wide settings, security, and general configuration tasks are performed. Text is the development interface used for creating and editing the rules, definitions, and customization logic that shape how the system behaves. Hyperspace is the clinician-facing workspace for everyday patient care, not for building configurations. Chronicles is the data storage layer, not a user interface for admin tasks. So the interfaces used to build and configure are Classic and Text.

6. Which field in the EAP record allows for defining multiple contexts with varying OCCs?

A. Display Items

B. Summary Items

C. Configuration

D. Item Control

Defining multiple contexts with different OCCs lives in the configuration area because this section sets up the overall structure and rules that govern how the EAP record behaves across contexts. The configuration field is where you define each context and assign the corresponding OCC values, enabling context-specific behavior and comparisons. Display Items is about how information is shown, Summary Items handles aggregates, and Item Control governs item-level behavior—none of these establish or map multiple contexts with varying OCCs. So, the configuration area is the appropriate place to set up and manage multiple contexts with their distinct OCCs.

SAMPLE

7. The MAR will automatically document the stopped time of an infusion.

A. Not Specified

B. Sometimes

C. True

D. False

Infusion stop time on the MAR should reflect what actually happened, and in many systems that exact stop moment isn't recorded automatically. A stop can happen for various reasons—completion, interruption, or a change in plan—and the MAR needs a precise time entry to ensure safety, proper dosing records, and regulatory compliance. While some integrated setups with infusion pumps can push stop times to the MAR, this isn't guaranteed in every configuration, so relying on automatic documentation isn't universally true. Typically, the clinician enters or confirms the stop time when the infusion is stopped, or uses the device data if available. That's why the assertion that the MAR will automatically document the stopped time is not generally correct.

8. Which statement is true about the display of Treatment Conditions order comments in the Treatment Plan?

A. The Comment is optional

B. Comments are not shown

C. Comments are restricted

D. The Comment must appear as a display item

In a Treatment Plan, comments that accompany a Treatment Condition carry important context about why that condition was chosen, any special instructions, or considerations for execution. Making the Comment appear as a display item ensures this information is immediately visible to anyone reviewing the plan—clinicians, nurses, and care coordinators—during planning, handoffs, or rounds. This visibility supports safer, more coordinated care by providing the rationale and details at a glance, not buried in notes or hidden from view. If the comment weren't displayed, or were optional or restricted, there's a real risk it would be overlooked or inconsistently communicated, which could lead to misinterpretation or errors in following the plan. Displaying the Comment as a display item standardizes its presence, making the rationale and instructions readily accessible to all members of the care team.

9. What is a purpose of survivorship visits for an oncology patient?

A. To discuss treatment options and assign a patient's treatment plan.

B. To administer chemotherapy treatment.

C. To monitor the patient's side effects and monitor for any cancer recurrence.

D. To assess the severity of the patient's cancer through staging.

Survivorship visits focus on long-term health after active cancer treatment. The main purpose is to monitor for late effects of therapy and to watch for any signs that cancer has returned. In these visits, clinicians review symptoms, perform a physical exam, and follow a surveillance plan that may include imaging or labs at recommended intervals to detect recurrence early. They also address ongoing health risks and quality-of-life issues that can arise after treatment. These visits aren't about starting new treatment or delivering chemotherapy, and staging is not the central goal here, since that process is tied to diagnosis and initial treatment planning rather than routine follow-up.

SAMPLE

10. Which scheduling strategy is best for two departments needing different buffer times between infusions?

A. The Infusion Duration Table and a Cadence Decision Tree to modify the buffer time depending on the infusion department being scheduled to.

B. Define the appointment length in two different Procedure (EAP) records for the different infusion departments.

C. Define the appointment length in two different Order Group (OSQ) records for the different infusion departments.

D. Use the Infusion Duration Table.

Differentiating buffer times between departments requires both accurate duration data and department-specific scheduling rules. The Infusion Duration Table provides the actual length of each infusion, so the system knows how much time to allocate for the procedure. But the duration alone doesn't determine how long to pause between infusions for a given department. The Cadence Decision Tree adds department-specific logic to decide the cadence, including the buffer between infusions. By combining these, you can automatically adjust the inter infusion gap based on which department is scheduling, giving you tailored buffers that match each department's workflow. Using separate procedure records or separate order groups to define appointment lengths would fix a duration per department but wouldn't offer the dynamic, department-based buffer control that cadence rules provide. Relying only on the Infusion Duration Table wouldn't address the need for different buffers at all. So the paired use of the Infusion Duration Table with a Cadence Decision Tree best meets the requirement.

Next Steps

Congratulations on reaching the final section of this guide. You've taken a meaningful step toward passing your certification exam and advancing your career.

As you continue preparing, remember that consistent practice, review, and self-reflection are key to success. Make time to revisit difficult topics, simulate exam conditions, and track your progress along the way.

If you need help, have suggestions, or want to share feedback, we'd love to hear from you. Reach out to our team at hello@examzify.com.

Or visit your dedicated course page for more study tools and resources:
