Introduction

Preparing for a certification exam can feel overwhelming, but with the right tools, it becomes an opportunity to build confidence, sharpen your skills, and move one step closer to your goals. At Examzify, we believe that effective exam preparation isn't just about memorization, it's about understanding the material, identifying knowledge gaps, and building the test-taking strategies that lead to success.

This guide was designed to help you do exactly that.

Whether you're preparing for a licensing exam, professional certification, or entry-level qualification, this book offers structured practice to reinforce key concepts. You'll find a wide range of multiple-choice questions, each followed by clear explanations to help you understand not just the right answer, but why it's correct.

The content in this guide is based on real-world exam objectives and aligned with the types of questions and topics commonly found on official tests. It's ideal for learners who want to:

- Practice answering questions under realistic conditions,
- Improve accuracy and speed,
- Review explanations to strengthen weak areas, and
- Approach the exam with greater confidence.

We recommend using this book not as a stand-alone study tool, but alongside other resources like flashcards, textbooks, or hands-on training. For best results, we recommend working through each question, reflecting on the explanation provided, and revisiting the topics that challenge you most.

Remember: successful test preparation isn't about getting every question right the first time, it's about learning from your mistakes and improving over time. Stay focused, trust the process, and know that every page you turn brings you closer to success.

Let's begin.

SAMPLE

How to Use This Guide

This guide is designed to help you study more effectively and approach your exam with confidence. Whether you're reviewing for the first time or doing a final refresh, here's how to get the most out of your Examzify study guide:

1. Start with a Diagnostic Review

Skim through the questions to get a sense of what you know and what you need to focus on. Your goal is to identify knowledge gaps early.

2. Study in Short, Focused Sessions

Break your study time into manageable blocks (e.g. 30 – 45 minutes). Review a handful of questions, reflect on the explanations.

3. Learn from the Explanations

After answering a question, always read the explanation, even if you got it right. It reinforces key points, corrects misunderstandings, and teaches subtle distinctions between similar answers.

4. Track Your Progress

Use bookmarks or notes (if reading digitally) to mark difficult questions. Revisit these regularly and track improvements over time.

5. Simulate the Real Exam

Once you're comfortable, try taking a full set of questions without pausing. Set a timer and simulate test-day conditions to build confidence and time management skills.

6. Repeat and Review

Don't just study once, repetition builds retention. Re-attempt questions after a few days and revisit explanations to reinforce learning. Pair this guide with other Examzify tools like flashcards, and digital practice tests to strengthen your preparation across formats.

There's no single right way to study, but consistent, thoughtful effort always wins. Use this guide flexibly, adapt the tips above to fit your pace and learning style. You've got this!

Questions

SAMPLE

1. At a military funeral, which moments require saluting?

A. Only during Taps.

B. During the caisson passing, the casket carriage, the firing of volleys and the playing of Taps.

C. Only when a chaplain speaks.

D. Never during volleys.

2. Which field indicates when the sUAS incident occurred?

A. Date Time Group (DTG) of incident and duration

B. First detection

C. sUAS airframe

D. sUAS detailed description

3. Besides identifying the target, what else should you be aware of?

A. What is around and behind the target

B. Its color

C. Its altitude

D. Its speed

4. In the percent problem: 40% of x equals 80. Find x.

A. 180

B. 200

C. 210

D. 230

5. What are the 2 key components of command and control?

A. Local Control, Remote Execution

B. Decentralized Command, Centralized Execution

C. Unified Command, Exclusive Execution

D. Centralized Command, Decentralized Execution

6. The big-O complexity of binary search in a sorted array of length n is?

A. O(log n)

B. O(n)

C. O(1)

D. O(n log n)

SAMPLE

7. Do individuals carrying items in both hands need to salute?

A. Yes

B. No, as long as they are unable to transfer items to left hand

C. Only when in formation

D. Not required at all

8. What is the first step in the M18 clearing procedure?

A. Magazine: Remove ammo source by pressing magazine catch/release button

B. Chamber: Lock slide to the rear

C. Visually inspect chamber

D. Safety: Place the manual safety on safe position by moving selector to up position

9. Which term denotes Urgent in the precedence categories?

A. Routine

B. Urgent Surgical

C. Urgent

D. Priority

10. What is the benefit of A-staff?

A. Reduces leadership opportunities

B. Enhances leadership opportunities, aligns with modern AF operations, improved coordination

C. Increases workload with little payoff

D. Creates redundancy with no benefits

SAMPLE

Explanations

SAMPLE

1. At a military funeral, which moments require saluting?

A. Only during Taps.

B. During the caisson passing, the casket carriage, the firing of volleys and the playing of Taps.

C. Only when a chaplain speaks.

D. Never during volleys.

Salutes at a military funeral are part of the ceremonial honors during key moments of the procession. When the caisson passes and the casket carriage moves by, the honor detail renders a salute to honor the deceased. The firing of volleys is a formal rifle salute, so a salute is expected during that sequence as well. Finally, the playing of Taps marks the conclusion of the ceremony, and a salute or respectful recognition accompanies the bugle call. These moments—caisson and casket carriage, the volley firing, and Taps—are the times salutes are required. The chaplain speaking is a moment of prayer, not a cue for a military salute, so saluting there isn't part of the standard ceremony.

2. Which field indicates when the sUAS incident occurred?

A. Date Time Group (DTG) of incident and duration

B. First detection

C. sUAS airframe

D. sUAS detailed description

The field that shows when the incident happened is the Date Time Group of incident and duration. It provides the exact date and time the incident began and how long it lasted, which is essential for understanding the timeline, coordinating responses, and documenting the event for reports. Other fields describe what was involved or happened, not when it occurred: first detection notes when the incident was first noticed, the airframe records the drone type, and the detailed description covers the event's specifics.

3. Besides identifying the target, what else should you be aware of?

A. What is around and behind the target

B. Its color

C. Its altitude

D. Its speed

Beyond simply recognizing what you're looking at, you need to assess how fast it's moving. The target's speed tells you how its position will change in the next moment, which is crucial for timing your action. If the target is moving, you'll often need to lead your aim—shoot where the target will be, not where it is now—to have a chance of a hit. Speed also affects safety and decision-making: a fast-moving target can emerge from behind cover or change direction quickly, so understanding motion helps you anticipate and adjust quickly rather than reacting late. If the target is stationary, speed isn't a factor, but any movement requires this consideration to engage effectively and safely.

SAMPLE

4. In the percent problem: 40% of x equals 80. Find x.

A. 180

B. 200

C. 210

D. 230

To solve this, treat percent as a part of x. 40% means 0.40, so set up the equation 0.40 × x = 80. Solve for x by dividing both sides by 0.40: x = 80 ÷ 0.40 = 200. You can also see it as a fraction: 40% is 2/5, so (2/5) × x = 80; multiplying both sides by 5/2 gives x = 80 × 5/2 = 200. Quick check: 40% of 200 is 80, which matches. The other options give different results when multiplied by 0.40 (72, 84, 92, etc.), so only 200 works.

5. What are the 2 key components of command and control?

A. Local Control, Remote Execution

B. Decentralized Command, Centralized Execution

C. Unified Command, Exclusive Execution

D. Centralized Command, Decentralized Execution

The two key components are centralized command and decentralized execution. In command and control, a central authority sets the overall goals, priorities, and direction to keep everyone aligned and avoid conflicting actions. At the same time, those who are actually carrying out the plan have the authority to act on the spot, adapt to local conditions, and implement decisions quickly without waiting for every detail to come from above. This combination keeps the mission coherent while allowing fast, on-the-ground responsiveness. Other setups that shift authority in the opposite direction tend to slow things down or create inconsistency: giving the ground teams the decision power without clear central direction can lead to divergent actions, while a rigid top-down execution without local latitude can't adapt to changing situations.

6. The big-O complexity of binary search in a sorted array of length n is?

A. O(log n)

B. O(n)

C. O(1)

D. O(n log n)

Binary search works by halving the search space with each comparison. In a sorted array, you check the middle element and then discard the half that cannot contain the target. After k comparisons, at most n/2^k elements remain to consider. When n/2^k ≈ 1, you've narrowed it down to a single possibility, which happens after k ≈ log2 n steps. Since the number of steps grows with the logarithm of n, the time complexity is O(log n). The base of the logarithm doesn't matter for Big-O. Other options describe longer processes or constant-time behavior, which doesn't capture the halving pattern of binary search.

SAMPLE

7. Do individuals carrying items in both hands need to salute?

A. Yes

B. No, as long as they are unable to transfer items to left hand

C. Only when in formation

D. Not required at all

Salutes are performed with a free hand, since the motion to the head needs a hand that isn't occupied. When you're holding items in both hands, you should not attempt the salute unless you can free the right hand by transferring items to the left hand. If you can shift the load so the right hand is free, you should salute. If both hands are truly unable to release items, a salute isn't rendered. This makes the rule practical and safe, focusing on whether the right hand can be freely raised without dropping or fumbling gear.

8. What is the first step in the M18 clearing procedure?

A. Magazine: Remove ammo source by pressing magazine catch/release button

B. Chamber: Lock slide to the rear

C. Visually inspect chamber

D. Safety: Place the manual safety on safe position by moving selector to up position

Engaging the manual safety first creates a safe starting condition before you touch the firearm. When the safety is in the safe position, the gun cannot discharge even if a round is chambered or the trigger is inadvertently moved during the clearance sequence. This protective step reduces risk as you proceed to remove the magazine (the ammunition source), lock the slide to the rear to expose the chamber, and visually inspect the chamber to confirm it's empty. Prioritizing the safety step helps ensure everything you do afterward is performed under safe control.

9. Which term denotes Urgent in the precedence categories?

A. Routine

B. Urgent Surgical

C. Urgent

D. Priority

This question tests how precedence categories signal urgency, and the term that directly communicates urgent timing is the word "Urgent." It's the label used to indicate cases should be addressed promptly, within a short timeframe defined by the system. Other terms carry different nuances: Routine means standard, non-urgent processing; Urgent Surgical specifies that the case needs surgical intervention and should be acted on quickly, but with a focus on the surgical aspect; Priority is a general sense of importance or ordering that doesn't by itself fix the exact urgent timing. The straight label "Urgent" is the one that denotes urgency most clearly and without extra qualifiers.

SAMPLE

10. What is the benefit of A-staff?

A. Reduces leadership opportunities

B. Enhances leadership opportunities, aligns with modern AF operations, improved coordination

C. Increases workload with little payoff

D. Creates redundancy with no benefits

A-staff acts as the central planning and leadership hub for the Air Force, bringing together seasoned officers to shape strategy, policy, and resource decisions. That setup creates leadership opportunities because staff roles expose officers to high-level decision making, cross functional coordination, and mentorship from senior leaders. It also aligns with modern Air Force operations by integrating plans across domains—air, space, cyber—and across services and agencies, ensuring actions reflect current doctrine and national priorities. Improved coordination comes from having a unified point for setting priorities and using standardized processes, which helps synchronize efforts and reduce duplicative work. So, the benefit lies in developing leaders, coordinating complex, multi-domain operations, and delivering cohesive execution.

Next Steps

Congratulations on reaching the final section of this guide. You've taken a meaningful step toward passing your certification exam and advancing your career.

As you continue preparing, remember that consistent practice, review, and self-reflection are key to success. Make time to revisit difficult topics, simulate exam conditions, and track your progress along the way.

If you need help, have suggestions, or want to share feedback, we'd love to hear from you. Reach out to our team at hello@examzify.com.
