Explanations

SAMPLE

1. Flight attendants assist passengers with disabilities in locating and managing what?

A. Seat Locations and boarding passes

B. Travel itineraries and special requests

C. Seat Locations and stowage of carry-on items

D. Companion support and food services

Flight attendants play a crucial role in ensuring that passengers with disabilities have a comfortable and safe travel experience. Assisting these passengers involves helping them with seat locations, as they may require specific accommodations based on their individual needs. This may include guiding them to designated seating that allows for easier access or providing information about accessible seating. Additionally, flight attendants assist with the stowage of carry-on items. Passengers with disabilities may require additional support in managing their belongings, especially if they have mobility challenges. Flight attendants are trained to help these passengers secure their items safely, ensuring both their comfort and adherence to safety regulations during the flight. Choosing the correct response reflects an understanding of the flight attendants' responsibilities in supporting passengers who may need extra assistance, which is a fundamental aspect of their duties on board.

2. What is the report for duty time for the first flight of a trip?

A. 30 minutes

B. 45 minutes

C. 60 minutes

D. 90 minutes

The report for duty time for the first flight of a trip is generally set at 45 minutes. This time frame is established to ensure that crew members have adequate time to prepare for the flight, which includes completing necessary pre-flight checks, attending briefings, and conducting any required safety inspections. The 45 minutes allows pilots and crew to arrive at the aircraft, conduct thorough preparations, and ensure everything is in order before the scheduled departure time. This period is critical for maintaining safety and operational efficiency, as it ensures that all crew members are ready and that the flight can proceed as planned without delays. Adhering to this standard helps to optimize on-time performance and the overall safety of the operation.

3. Before taking off, what is required of flight attendants regarding exit row passengers?

A. They must greet them

B. They must provide safety demonstrations

C. They must ensure they are capable

D. They must give them free snacks

The requirement for flight attendants regarding exit row passengers focuses on ensuring that these individuals are capable of performing the necessary duties in case of an emergency. This includes assessing whether the passengers seated in exit rows can understand and follow instructions, assist fellow passengers, and handle the emergency exit properly if required. This protocol is critical for the safety of all passengers on board, as those in exit rows play a vital role in emergency situations. Greeting exit row passengers and providing safety demonstrations, while important, do not specifically address the operational safety responsibilities assigned to flight attendants before takeoff. Similarly, offering free snacks does not contribute to ensuring safety and preparedness, which is the priority in the context of flight operations.

SAMPLE

4. What action must exit row passengers perform to ensure safe evacuation?

A. Signal for help;

B. Pass expeditiously through the emergency exit;

C. Wait for further instructions;

D. Assist others in the cabin;

Passengers situated in the exit row have a crucial role during an emergency evacuation. Their primary responsibility is to ensure that the emergency exit is used efficiently and effectively. This is critical because in an emergency situation, every second counts. By passing expeditiously through the emergency exit, these passengers are facilitating a speedy and orderly evacuation. The effectiveness of the evacuation process relies on thorough preparedness and swift action. Passengers in these critical seats are trained to open the exit and direct others to use it without hesitation. This not only helps in ensuring that everyone gets out of the aircraft quickly but also minimizes the risk of panic and chaos. Other options, while they may seem relevant, do not contribute directly to the immediate action required for a safe evacuation. For instance, signaling for help might be necessary if there are obstacles or if someone is incapacitated, but it does not expedite the evacuation itself. Similarly, waiting for further instructions can delay the evacuation process, and while assistance in the cabin is commendable, it is secondary to the immediate need to exit swiftly through the designated emergency exit.

5. What does 'S' stand for in the context of emergency evacuation or non-evacuation?

A. Signal

B. Safety notice

C. Survival technique

D. Support directive

In the context of emergency evacuation procedures, 'S' represents 'Signal'. This is crucial as it refers to the specific means of communication intended to alert passengers and crew to initiate an evacuation or to indicate a non-evacuation scenario. Signaling can include visual or audible cues, which play a vital role in ensuring that everyone is aware of the situation and knows how to react appropriately. Understanding the significance of a signal is imperative for maintaining order and efficiency during emergencies, ultimately contributing to the safety of all individuals on board. The other options, while relevant to safety and emergency protocols, do not directly capture the intended meaning of 'S' in this specific context.

6. What is the main function of SkyWest Airlines' compliance with ACAA regulations?

A. To enhance operational efficiency

B. To ensure equitable travel for all passengers

C. To follow federal safety guidelines

D. To manage flight schedules

The main function of SkyWest Airlines' compliance with ACAA regulations is to ensure equitable travel for all passengers. The Air Carrier Access Act (ACAA) is designed to prevent discrimination against individuals with disabilities in air travel. By adhering to these regulations, SkyWest aims to provide accessible and fair travel options, ensuring that all passengers, regardless of their physical abilities, have equal opportunities to fly. This includes providing necessary accommodations, accessible services, and a commitment to creating a supportive travel environment for all individuals. Hence, the focus on equitable travel aligns directly with the core purpose of the ACAA, reinforcing the airline's dedication to inclusion and accessibility.

7. What is a required condition for crew baggage during takeoff and landing?

A. It must be stored in the flight deck

B. It must be stowed in a shiftable location

C. It must be secured in approved stowage locations

D. It can remain unmonitored by the FA

The requirement for crew baggage during takeoff and landing is that it must be secured in approved stowage locations. This is important for ensuring the safety of the aircraft and its occupants. Securing baggage helps to prevent any potential hazards that could arise if the baggage were to move unexpectedly during critical phases of flight, such as takeoff and landing, which are the most crucial moments. Proper stowage ensures that the center of gravity of the aircraft remains stable and prevents obstruction in the aisles or emergency exits. In contrast, the other choices present conditions that do not align with safety protocols. Storing baggage in the flight deck is generally not permitted due to space and safety restrictions, while shiftable locations could pose a risk during turbulence or sudden maneuvers. Allowing baggage to remain unmonitored by the flight attendant is also against safety regulations since it could lead to unsecured items becoming projectiles in the event of a sudden stop or impact. Thus, the requirement for crew baggage to be secured in approved stowage locations is essential for maintaining a safe environment onboard the aircraft.

8. For the CRJ 700, what are the required minimum service times on the Delta system?

A. 35/25

B. 40/35

C. 45/40

D. 30/20

The required minimum service times for the CRJ 700 on the Delta system are 40 minutes for the cockpit crew and 35 minutes for the cabin crew. This specification ensures that all personnel can adequately prepare for their flight operations while adhering to safety and service standards. The cockpit crew has a longer minimum service time to account for necessary pre-flight checks, briefings, and system verifications that need to be completed to ensure the aircraft is genuinely ready for departure. Meanwhile, the cabin crew's minimum service time is slightly shorter, reflecting their responsibilities, which include preparing the cabin, conducting safety checks, and briefing on procedures. These times are established to guarantee that crews have sufficient time to complete required tasks, fostering a well-prepared operational environment and ensuring passenger safety and comfort during flights. Adhering to these minimum service times is critical in maintaining operational efficiency and meeting regulatory requirements within the airline industry.

9. What action must a flight attendant take regarding manual revisions before a trip?

A. Read them in-flight

B. Download them to the Company Manuals app

C. File them in their personal records

D. Submit them to their supervisor

Flight attendants are required to download manual revisions to the Company Manuals app before a trip to ensure they have the most up-to-date information readily accessible. This process is crucial because it allows flight attendants to remain informed about any changes in procedures, safety protocols, and operational updates that could affect their duties. By utilizing the Company Manuals app, flight attendants can conveniently access this information at any time, which enhances safety and compliance during their flights. Additionally, having the revisions downloaded ensures that all team members are on the same page regarding the current policies and procedures, contributing to a cohesive and efficient team approach to flight operations.

10. What defines an international flight diversion?

A. A flight that operates exclusively within the U.S.

B. A flight diverted to an international city from the U.S.

C. A flight diverted from one international city to another

D. A flight that has a domestic final destination only

An international flight diversion is characterized by a situation where a flight, originally scheduled to operate from the U.S. to a specific international destination, must reroute to an international city instead. This definition emphasizes that for a diversion to be classified as such, it must involve an international context wherein the flight's original purpose was to reach a foreign destination. Flight diversions typically occur due to various reasons such as weather conditions, mechanical issues, or air traffic control directives. When a flight is diverted from its intended international route to another international location, it reflects a procedural response to unforeseen circumstances while still operating within the framework of international aviation. The other options do not align with this definition. A flight operating strictly within the U.S. or with a domestic final destination does not involve international considerations, hence they would not qualify as international flight diversions. Similarly, while a diversion from one international city to another might seem related, it does not stem directly from a flight departing from the U.S., thus failing to meet the criteria defined for an international flight diversion originating from the U.S.
